

CITRUS

CARE INSTRUCTIONS

Light Requirements: Full/Partial Sun (at least 8 hours of sunlight). If less, especially in the winter months, supplement with artificial grow lights.

Temperature and Humidity: Citrus thrive within a temperature range of about 70 F. Citrus plants don't tolerate lower temperatures.

Watering: Avoid overwatering your citrus. Keep soil evenly moist allowing plant to dry out slightly in between waterings. You should allow the 1 to 2 inches of soil to dry between watering's. Water slowly until the soil is moist but not soggy. Semi-moist is best.

Fertilization: For the first 3 years, fertilize once every 6 weeks with Jack's Classic Citrus Feed. Fertilize mature trees 3 times per year between April and September.
